PROFILE

A seasoned IT professional with over 15 years of experience as an IT Manager and 2 years as a DevOps Engineer. I am a highly analytical, solution-oriented, and resourceful individual with extensive knowledge in network administration, server support, and application support.

In my previous role as an IT Manager, I demonstrated the ability to deliver creative and relevant server and application strategies through comprehensive problem-solving skills. I have expertise in troubleshooting and administration for all Microsoft operating systems and many Linux Operating Systems.

Transitioning into a DevOps Engineer role, I have continued to leverage my problem-solving skills and technical expertise to streamline operations, enhance collaboration between development and operations teams, and maintain high-quality, continuous delivery of applications and services.

My career journey has equipped me with a unique blend of skills in both management and technical domains, enabling me to understand and bridge the gap between these areas in IT projects. I am excited to bring this holistic approach to future roles and challenges.

PROFESSIONAL EXPERIENCE

DevOps System Admin

KubixCloud

08/2022 – present
Harju maakond, Estonia

The company I worked for decided to move the project from an on-premise environment to AWS. Before this decision, I was managing 12 remote servers and a Proxmox with 120 VMs. Some of the technologies we used include: MongoDB, Rancher-k8s, k3s, Kong-Gateway, Redis, Proxmox, Ansible, Harbor, Graylog, etc. During the transition to AWS, I ensured the completion of the transition process by finding the AWS equivalents of these systems.

- Administration of the IT infrastructure
- Choosing the right deployment models
- Conducting the testing protocol and critical monitoring
- Automation of repetitive tasks
- Provide the server support and the application support
- Ensure that the backup is sufficient, and if there isn't any adequate backup, then you have to create a backup policy as well.

Operations Manager

GM-Informatics

2018 – 08/2022
Muğla, Türkiye

I am responsible of all operations between contracted firms and internal management systems.

Responsible for approximately 850 assets of IT infrastructure.
